Archi

archimate modelling

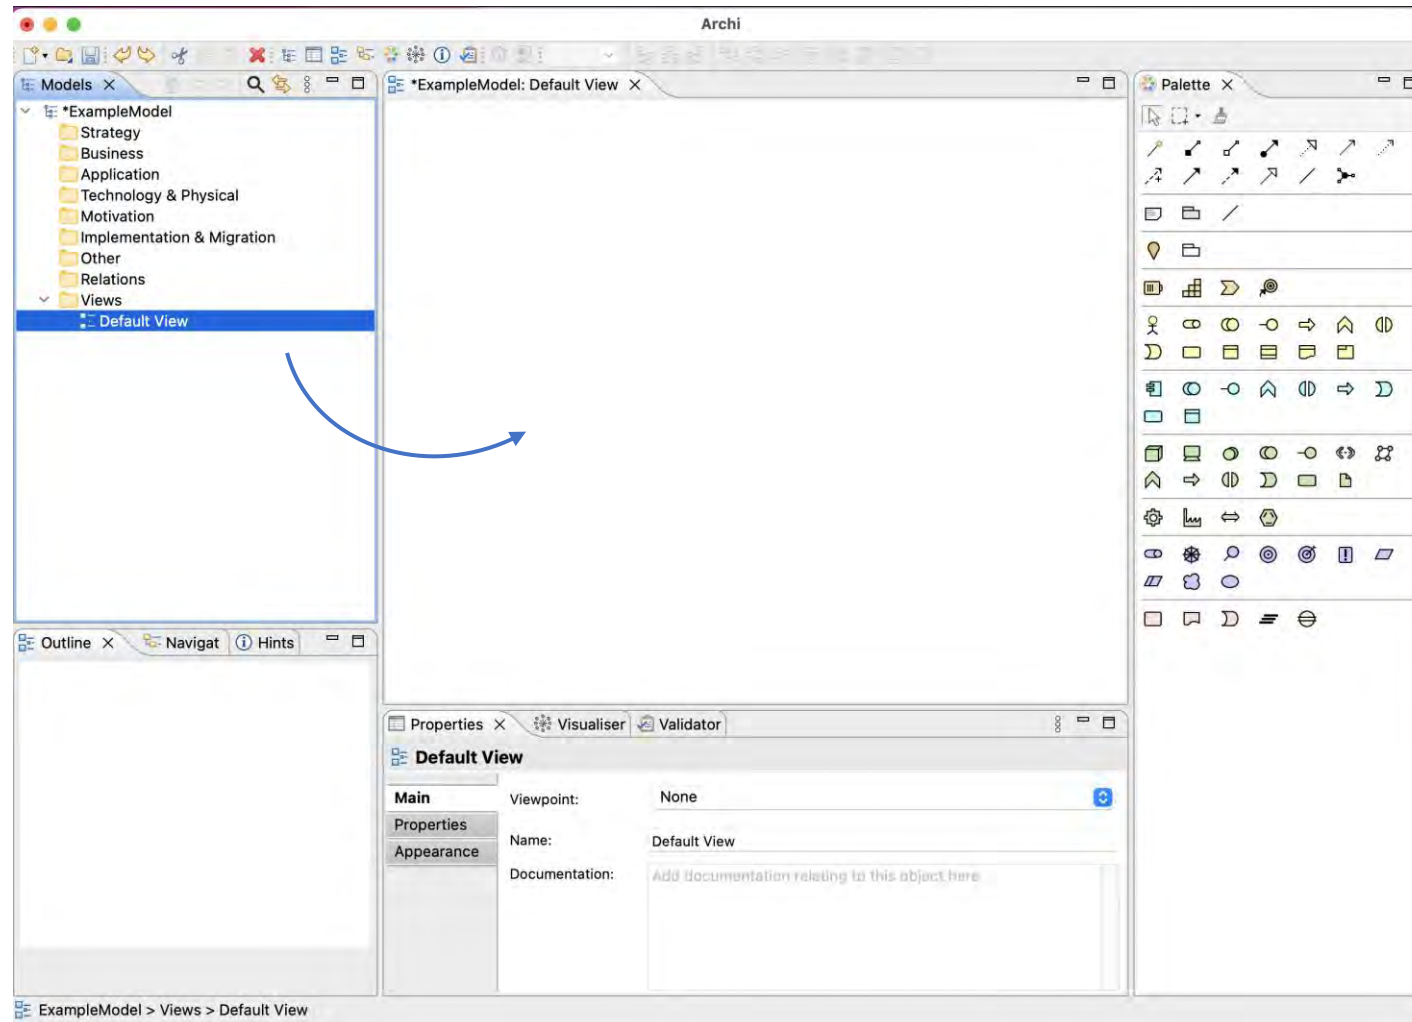

Neues ArchiMate-Modell erstellen

Modell in Archi

Create your model in the view.

Here you find the available relations, select the correct one based on your semantic

In the Palette you find all elements necessary. Focus on the Elements of the Business, Application and Technology layers

Export aus Archi als PDF

The screenshot shows the Archi software interface. The 'File' menu is open, and the 'View As Image...' option is highlighted. The 'Export as Image' dialog box is open, showing the 'Format' dropdown set to 'PDF Image'. The file path is '/Users/Default View.pdf'. A diagram on the right shows a 'Business Service' box and an 'Application Component' box connected by a dashed line with a triangle arrowhead.

To visualize your model in slides export them as images

For best quality export as PDF Image (it can be inserted to power-points slides just like images)
